                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           4052 CTGCCGAGAAAGTATCCATCATGGCTGATGCAATGCGGCGGCTGCATACGCTTGATCCGG 4111
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes a nucleotide expression system for the introduction of a therapeutic gene comprising: (1) a nucleotide sequence encoding an immune suppression gene; (ii) a promoter; and (iii) a transcription termination signal, where the system is able to inhibit, evade or aliminate a recipient cell immune response to the therapeutic gene when the gene is transformed into a recipient cell. AAX90481 to AAX90484 represent specifically claimed plasmid retroviral vector nucleotide sequences from the present invention. The expression system and vectors containing it can be used for gene therapy, for treating an MHC-I autoimmune disease or for killing tumour cells. The expression system system contains an immunosuppressive gene which prevents host rejection

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention describes a recombinant by comparison a humanised red shifted green fluorescent protein (HRGFP), and a promoter sequence and a termination sequence functionally coupled to the codding sequence. Also described: (1) a plasmid vector DNA sequence (II) anabling replication of the vector or in a host cell and (1); (2) infectious virus (III) comprising at least cell and (1); (2) infectious virus (III) and sequence from (I) in a host cell capable of the vector or in a host cell and (I); (2) infectious virus (III) and sorting at least one copy of (I). (I) is useful for identifying comprising at least one copy of (I). (I) is useful for identifying transformed cells to allow for direct observation of transferred genes into living cells to allow for direct observation of transferred genes into living cells by introducing (I) into the cell and measuring close into living cells which have been transferred cells. The catching the absorbance at 490-760 mm, and the excitation is from 420-470 mm. (I) is also useful for selecting sorter (FACS). The expression of the HRGFP gene in living cells with advance the study of gene transfer; gene expression and gene product function in vitro or in vivo, particularly for human gene therapy applications requiring FACS analyses of living cells. The present for applications requiring FACS analyses of living cells. The present capterions requiring FACS analyses of living cells. The present invention. N.B. The SEQ ID NO:8 in the sequence Listing represents a specification: where SEC ID NO:1 to 6 of the cequence Listing represent the sequence Listing represents and sequence Listing represents and sequence Listing represent the sequence of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Recombinant DNA construct for identifying transformed cells to allow for direct observation of transferred genes into living cells, comprising nucleotide sequence encoding red shifted green fluorescent protein.
                                                                                                                                                                                                                                                                                                                                                                 recombinant DNA construct;

Sequence 2, Application US/09808743

Patent No. US20020068711A1

GENERAL INPORMATION:

APPLICANT: THE JOHNS HOPKINS UNIVERSITY SCHOOL OF MEDICINE

APPLICANT: PEDERSEN, Peter

APPLICANT: PEDERSEN, Peter

TITLE OF INVENTION: ARREST OF PROLIFFATION OF HIGHLY GLYCOLYTI

FILE REFERENCE: JUL1720-1

CURRENT APPLICATION NUMBER: US/09/808,743

CURRENT FILING DATE: 2001-03-14

PRIOR PILING DATE: 2000-03-14

NUMBER OF SEQ ID NOS: 10

SOUTHARE: Patentin version 3.0

SEQ ID NO 2:

LENGTH: 6444
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Indele
